

Panama Drive Drainage Problem

Panama Drive Drainage Problem

Problem

- Drainage collects at Panama Drive flowing north and drains into the Highline Canal within a concrete pan
- During large storms the concrete pan capacity is exceeded and the stormwater ponds until deep enough to spill between buildings, flooding homes and businesses along Panama Drive

Resolution No. 08-15

- Denver Water Board will be contacted to determine whether they will allow improved conveyance into the Highline Canal
- Alternative solutions to the problem will be studied
- Alternative costs will be defined
